

John Aledare

Machine Learning Engineer | Applied AI Engineer | Computer Vision

Nigeria — aledareoluwaseunjohn@gmail.com — GitHub — LinkedIn — Portfolio

Education

University of Ilorin Ilorin, Nigeria

Bachelor of Engineering (B.Eng.) in Computer Engineering

Jun 2021 – Jul 2026

Technical Skills

Programming Languages: Python, SQL, JavaScript, TypeScript, C++

Machine Learning & AI: PyTorch, TensorFlow, Scikit-learn, OpenCV, Keras, ONNX, Transfer Learning, Computer Vision, NLP

Generative AI & NLP: RAG Pipelines, FAISS, SentenceTransformers, Vector Search, Prompt Engineering, LLM Evaluation, Agentic Workflows

Backend & Infrastructure: FastAPI, Docker, Kubernetes, AWS, GCP, Linux, Git

Deployment & Tools: Streamlit, Hugging Face Spaces, REST APIs

Experience

Machine Learning Engineer Jan 2026 – Present

Queryfier LLC (Remote)

- Build and deploy production-grade machine learning systems for NLP and Computer Vision applications.
- Develop end-to-end ML pipelines, model serving infrastructure, and FastAPI-based APIs.
- Optimize training and inference workflows for scalable deployment.

Machine Learning Engineer Intern & Python Tutor Mar 2025 – Dec 2025

Centre for Applied Machine Learning and Data Science (CAMLDS)

- Developed machine learning solutions for NLP and Computer Vision research projects.
- Built data preprocessing, model training, and deployment pipelines.
- Taught Python, Pandas, NumPy, and Scikit-learn while mentoring junior interns.

Selected Projects

BitCheck 2026

FastAPI, PyTorch, EfficientNet-B0, OpenCV, Tesseract OCR, Docker [bitcheckapp.vercel.app](#)

- Developed a multi-signal image verification platform combining metadata analysis, OCR-based watermark detection, OpenCV template matching, image forensics, and AI-generated image classification.
- Trained and deployed an EfficientNet-B0 classifier and integrated Grad-CAM explainability to generate heatmaps, overlays, and influence-region visualizations for transparent risk assessment.

LockedIn 2026

FastAPI, DeepSeek, Tavily API, YouTube API, Pydantic v2, SQLite [lockedin4l.vercel.app](#)

- Built an AI-powered roadmap generation service that retrieves and filters learning resources from YouTube and web search before generating structured skill-learning pathways using DeepSeek LLMs.
- Implemented strict JSON schema validation with Pydantic v2, SQLite-based request caching, resource quality filtering, and fallback generation pipelines to improve reliability and reduce API costs.

Certifications

- OCI Generative AI Professional — Oracle University (2025)
- Oracle Certified AI Foundations Associate — Oracle University (2025)
- Machine Learning Specialization — Stanford University & DeepLearning.AI (2025)
